

Tak Biotech

TakBioTech is a pioneering force in the biotechnology industry, where scientific innovation meets precision engineering. With a steadfast commitment to quality, efficiency, and scientific excellence, we specialize in a range of cutting-edge services aimed at accelerating the development of biotechnology-based therapeutic products worldwide.

Our expertise extends across a diverse range of countries, including numerous regions in Europe, the USA, Canada, and the Middle East. This broad geographic reach allows us to deliver our advanced biotechnology solutions to a global audience. By operating in these key markets, we ensure that our cutting-edge services are accessible to clients worldwide, catering to the unique needs and regulatory requirements of each region.

TakBiotech offers the following services:

1. Many recombinant proteins cover most genes.
2. Recombinant proteins form multiple species (human, mouse, zebrafish, dog, monkey, pig...)
3. Recombinant proteins production by various sources (HEK293, CHO, NS0, Insect cells, E. coli, Yeast,...)
4. Recombinant protein production with different tags (His, GST, Flag, T7, HA...) on the N-terminus or C-terminus;
5. Peptide synthesis
6. Protein modification and engineering
7. Development of cell lines
8. Vector synthesis for gene manipulation and gene therapy
9. Scale-up optimization for upstream fermentation
10. Scale-up optimization for downstream purification
11. We use state-of-the-art technology and equipment to ensure that our products are of the highest quality and meet the strictest regulatory standards.
12. From the initial stages of research and development to the final delivery of our products, we uphold rigorous standards to ensure excellence at every step.
